ACS

# Engineering Services

Automated Control Systems (ACS) is a product and technology development company with decades of experience in consumer, industrial, medical, military, and automotive industries providing electronic design and software solutions. Since 1983, ACS has provided electronic design services of a wide range of low voltage, low powered products for moderate and advanced designs.

**Partial List of Services:**

- Electrical engineering
- Software engineering
- Mechanical engineering
- PC board schematic creation and conversion
- Our PC board layouts meet 60601-1-2 EMI/EMC and FCC requirements for US and CE markets
- Complete product prototyping (mechanical, electrical and industrial)
- Battery technologies (including battery protection and charging)
- Motor control systems
- Wireless communications including WiFi, Bluetooth and ZigBee
- Application development for iPad and Android platforms

ACS knows how to take your project and initiatives from napkin to delivery. We are confident that our cross-over expertise in multiple industries makes us uniquely qualified to support you in your product engineering needs.

We also offer manufacturing, test, and assembly services to support your ramp-up or on-going production requirements.

Our core staff of electrical and mechanical engineers and technicians manage several projects simultaneously. Where necessary, we enlist the aid of our strategic partners to provide a complete, one-stop-shopping experience for our customers.
